

The Separett Villa Composting Toilet

The Separett Composting toilet has been designed for household use, where it has been proven over many years to be an ideal solution. The benefits of this toilet include no water usage, infrequent emptying, useful fertiliser from the urine and decomposing the solid waste into a re-usable compost. It is a stylish modern unit, simple to use and easy to clean.

Benefits

- *No smell
- *No harmful chemicals
- *Little emptying
- *Environmentally friendly

Available from £659.99 including VAT

The Separett Composting Toilet works by separating liquids from solids. The volume of solid matter is about 15% of the waste produced. The solid tank can therefore easily hold a seasons worth of weekend use or 3 - 4 months of daily use. Much like a household W.C. the Separett Villa Composting Toilet has a bowl, lid and seat. In addition it also has an automatic opening valve for the solids tank and a rotation mechanism to spread the solid waste evenly. The toilet uses no water, which can account for up to 40% of a household's use. The unit has an integral 12 volt fan that provides a constant negative pressure to pull moisture out of the living space and ensure no smell is present. It also has a 240 volt adaptor for mains use where required. Urine, being a sterile liquid, can be simply disposed of, either in the ground where it makes an excellent fertiliser or down a suitable drain or waste disposal unit.
